NEW QUESTION: 2

PERT diagrams are free-form networks showing each activity in a large project as a line between events. The critical path is the longest path in time through the network. That path is critical in that, if any activity on the critical path takes longer than expected, the entire project will be delayed. Paths that are not critical have slack time. Slack is the number of days an activity can be delayed without forcing a delay for the entire project.

- A. PERT diagrams are free-form networks showing each activity in a large project as a line between events. The critical path is the longest path in time through the network. That path is critical in that, if any activity on the critical path takes longer than expected, the entire project will be delayed. Paths that are not critical have slack time. Slack is the number of days an activity can be delayed without forcing a delay for the entire project.
- B. PERT diagrams are free-form networks showing each activity in a large project as a line between events. The critical path is the longest path in time through the network. That path is critical in that, if any activity on the critical path takes longer than expected, the entire project will be delayed. Paths that are not critical have slack time. Slack is the number of days an activity can be delayed without forcing a delay for the entire project.
- C. PERT diagrams are free-form networks showing each activity in a large project as a line between events. The critical path is the longest path in time through the network. That path is critical in that, if any activity on the critical path takes longer than expected, the entire project will be delayed. Paths that are not critical have slack time. Slack is the number of days an activity can be delayed without forcing a delay for the entire project.
- D. PERT diagrams are free-form networks showing each activity in a large project as a line between events. The critical path is the longest path in time through the network. That path is critical in that, if any activity on the critical path takes longer than expected, the entire project will be delayed. Paths that are not critical have slack time. Slack is the number of days an activity can be delayed without forcing a delay for the entire project.

Answer: B

Explanation:

PERT diagrams are free-form networks showing each activity in a large project as a line between events. The critical path is the longest path in time through the network. That path is critical in that, if any activity on the critical path takes longer than expected, the entire project will be delayed. Paths that are not critical have slack time. Slack is the number of days an activity can be delayed without forcing a delay for the entire project.

NEW QUESTION: 3
