Answer: B

NEW QUESTION: 4
What is a key benefit of using Oracle Cloud Infrastructure's
Resource Manager for your Terraform provisioning and management
activities?
A. You can use Resource Manager to identify and maintain an
Inventory of all Compute and Database Instances across your
tenancy.
B. Resource Manager has administrative privileges by design.
Even if your IAM user does not have access, you can leverage
Resource Manage provision new resources to any compartment in
the Tenancy.
C. Resource Manager manages the Terraform state file for your
infrastructure and locks the file so that only one Job at a
time can run on a given stack.
D. You can use Resource Manager to apply patches to all
existing Oracle Linux Instances In a specified compartment.
Answer: C
Explanation:
Explanation
Resource Manager is an Oracle Cloud Infrastructure service that
allows you to automate the process of provisioning your Oracle
Cloud Infrastructure resources. Using Terraform, Resource
Manager helps you install, configure, and manage resources

through the "infrastructure-as-code" model.
A Terraform configuration codifies your infrastructure in declarative configuration files. Resource Manager allows you to share and manage infrastructure configurations and state files across multiple teams and platforms. This infrastructure management can't be done with local Terraform installations and Oracle Terraform modules alone.
JOB: Instructions to perform the actions defined in your configuration. Only one job at a time can run on a given stack; further, you can have only one set of Oracle Cloud Infrastructure resources on a given stack. To provision a different set of resources, you must create a separate stack and use a different configuration.
The following image represents a generalized view of the Resource Manager workflow.
