NEW QUESTION: 1Your network contains 50 servers that run Windows Server 2003 and 50 servers that run Windows Server2008. You plan to implement Windows Server 2012.You need to create a

report that includes the following information: The servers that run applications and services that can be moved to Windows Server 2012. The servers that have hardware that can run Windows Server 2012. The servers that are suitable to be converted to virtual machines hosted on Hyper-V hosts that run Windows Server 2012. What should you do?

A. From an existing server, run the Microsoft Assessment and Planning (MAP) Toolkit.
B. From an existing server, run the Microsoft Application Compatibility Toolkit (ACT).
C. Install Windows Server 2012 on a new server, and then run the Windows Server Migration Tools.
D. Install Windows Server 2012 on a new server, and then run Microsoft Deployment Toolkit (MDT) 2012.

Answer: A

Explanation/Reference: Explanation: The Microsoft Assessment and Planning Toolkit (MAP) is an agentless, automated, multiproduct planning and assessment tool for quicker and easier desktop, server and cloud migrations. MAP provides detailed readiness assessment reports and executive proposals with extensive hardware and software information, and actionable recommendations to help organizations accelerate their IT infrastructure planning process, and gather more detail on assets that reside within their current environment. MAP also provides server utilization data for Hyper-V server virtualization planning; identifying server placements, and performing virtualization candidate assessments, including ROI analysis for server consolidation with Hyper-V. The latest version of the MAP Toolkit adds new scenarios to help you plan your IT future while supporting your current business needs. Included scenarios help you to:

- Plan your deployment of Windows 8 and Windows Server 2012 with hardware and infrastructure readiness assessments
- Assess your environment for Office 2013
- Plan your migration to Microsoft Azure Virtual Machines
- Track Lync Enterprise/Plus usage
- Size your desktop virtualization needs for both Virtual Desktop Infrastructure (VDI) and session based virtualization using Remote Desktop Services
- Ready your information platform for the cloud with SQL Server 2012
- Virtualize your existing Linux servers onto Hyper-V
- Identify opportunities to lower your virtualization costs with Hyper-V using the VMware migration assessment

MAP is just one of the tools provided by the Microsoft Solution Accelerators team. The Microsoft Assessment and Planning Toolkit, Microsoft Deployment Toolkit, and Security Compliance Manager provide tested guidance and automated tools to help organizations plan, securely deploy, and manage new Microsoft technologies-easier, faster, and at less cost. All are freely available, and fully-supported by Microsoft.

NEW QUESTION: 2 Which statement is true about Java byte code?

A. It can run on any platform only if that platform has both the Java Runtime Environment and a Java compiler.
B. It can run on any platform that has a Java compiler.
C. It can run on any platform.
D. It can run on any platform only if it was compiled for that platform.
E. It can run on any platform that has the Java Runtime Environment.

Answer: B

Explanation: Java byte codes

help make "write once, run anywhere" possible. You can compile your program into bytecodes on any platform that has a Java compiler. The bytecodes can then be run on any implementation of the Java VM. That means that as long as a computer has a Java VM, the same program written in the Java programming language can run on Windows 2000, a Solaris workstation, or on an iMac.
