The research and production of our CJE exam questions are undertaken by our first-tier expert team, You will witness your positive changes after completing learning our CJE study guide.

The three versions of our CJE training materials each have its own advantage, Of course, CJE simulating exam are guaranteed to be comprehensive while also ensuring the focus.

So all points of questions are wholly based on the real exam and we won the acclaim from all over the world, Every addition or subtraction of CJE exam questions in the exam syllabus is updated in our dumps instantly.

So our CJE learning dumps are acclaimed as masterpieces.

**NEW QUESTION:** 1Which two statements are true about variable extent size support for large ASM files?**A.** Rebalance operations are completed faster than with a fixed extent size**B.** Performance improves in a stretch cluster configuration by reading from a local copy of an extent.**C.** The metadata used to track extents in SGA is reduced.**D.** Resync operations are completed faster when a disk comes online after being taken offline.**E.** An ASM Instance automatically allocates an appropriate extent size.**Answer: C, E****Explanation:**A: Variable size extents enable support for larger ASM datafiles, reduce SGA memory requirements for very large databases (A), and improve performance for file create and open operations.C: You don't have to worry about the sizes; the ASM instance automatically allocates the appropriate extent size.**Note:**\* The contents of ASM files are stored in a disk group as a set, or collection, of data extents that are stored on individual disks within disk

groups. Each extent resides on an individual disk. Extents consist of one or more allocation units (AU). To accommodate increasingly larger files, ASM uses variable size extents.\* The size of the extent map that defines a file can be smaller by a factor of 8 and 64 depending on the file size. The initial extent size is equal to the allocation unit size and it increases by a factor of 8 and 64 at predefined thresholds. This feature is automatic for newly created and resized datafiles when the disk group compatibility attributes are set to Oracle Release 11 or higher.

**NEW QUESTION: 2**Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2 and has the DNS Server server role installed. Server1 has a zone named contoso.com. The zone is configured as shown in the exhibit. (Click the Exhibit button.) You need to assign a user named User1 permission to add and delete records from the contoso.com zone only. What should you do first?  
**A.** Enable the Advanced view from DNS Manager.  
**B.** Configure the zone to be Active Directory-integrated.  
**C.** Run the New Delegation Wizard.  
**D.** Add User1 to the DnsUpdateProxy group.

**Answer: B**  
**Explanation:** Secure dynamic updates are only supported or configurable for resource records in zones that are stored in Active Directory Domain Services (AD DS).  
**Note:** To modify security for a resource record:  
1. Open DNS Manager. In the console tree, click the applicable zone. In the details pane, click the record that you want to view. On the Action menu, click Properties. On the Security tab, modify the list of member users or groups that are allowed to securely update the applicable record and reset their permissions as needed.  
**Reference:** Modify Security for a Resource Record

**NEW QUESTION: 3** Which is a post sales implementation configuration and health check tool for NetApp systems or FlexPod?  
**A.** Cisco Resource Comparison Tool  
**B.** Cisco UCS Sizer for Enterprise Applications  
**C.** NetApp Solution Builder  
**D.** NetApp Config Advisor  
**Answer: D**
