All new domain controllers must be dynamically added to the subscription.

What should you do?

A. From Computer1, configure source-initiated event subscriptions. Install a server authentication certificate on Computer1. Implement autoenrollment for the Domain Controllers organizational unit (OU).

B. From Computer1, configure collector-initiated event subscriptions. From a Group Policy object (GPO) linked to the Domain Controllers organizational unit (OU), configure the Event Forwarding node.

Setting up a Source Initiated Subscription

Source-initiated subscriptions allow you to define a subscription on an event collector computer without defining the event source computers, and then multiple remote event source computers can be set up (using a group policy setting) to forward events to the event collector computer. This differs from a collector initiated subscription because in the collector initiated subscription model, the event collector must define all the event sources in the event subscription.
